Technical Skills

- **Programming Language:** Python, C/C++, PHP
- **BE-Framework & Libraries:** Django, Flask, Laravel, FastAPI, Pytest, Unittest, NumPy, Pandas, PySpark ...
- **JS-Framework:** Vue, Angular, React
- **Database:** MySQL, PostgreSQL, SQLite, MongoDB, Redis, Memcached
- **Servers & API Protocol:** Apache, Nginx, Vagrant, gRPC, REST, SOAP, GraphQL
- **Operating Systems:** Linux, Windows, macOS
- **Dev Tool:** Git, Postman, Elasticsearch, Docker, Jenkins, Ansible, ELK, Terraform, Pulumi, ArcGIS, RudderStack, Datadog
- **Cloud:** AWS (S3, EC2, VPC, RDS, Route53, ECS, ECR, Redis, Glue, DynamoDB, Lambda, Athena, ELB, CDN...), GCP...
- **Project Management:** Jira, ClickUp, Zenhub, Notion

Work Experiences

- **Staff Engineer – Skipper** (Sept 2021 - Present)
 - Architected a large and extensible serverless Microservices - Booking Engine from scratch, using FastAPI Framework with gRPC protocol in AWS ECS Clusters-Fargate and outbound through REST & SOAP protocol. Also, built a Content Management System using Django, requesting through GraphQL with Batch ETL process focusing Low Latency CDN and frequent Deployments through IAC tools, e.g., Terraform, Ansible entirely in AWS infrastructure.
Tech Stack: Python, Django, Docker, FastAPI, Jenkins, Terraform, Microservices, React.js, gRPC, GraphQL, AWS, PostgreSQL, Linux, JavaScript, Redis, Postman, ClickUp.
- **Sr Software Developer – Cisco** (Oct, 2019 – Sept 2021)
 - Designed and implemented highly scalable, backend API of Flask app, integrated with MySQL and MongoDB. Created a responsive web page with Angular and, built CI/CD pipeline using Jenkins deployed on AWS cloud. Outlined and configured multiple application monitoring platforms using ELK stack based on debugging, error, Nginx & sys log. Created API config file using swagger and, performed functional and, API test cases using Pytest.
 - Designed storage management portal app for seamless integration of concurrent requests using Django and, Vue JS. Also, augmented scripts and, enhanced performance by multithreading to generate larger datasets from the server. Built and refactor multiple plugins using shell & ETL script for Gerrit code review tool to perform production operations in CI/CD pipeline. Implemented an S2C pipeline for developers to minimize debugging issues.
Tech Stack: Python, AWS, Flask, PySpark, REST, Vue.js, PostgreSQL, NoSQL, ETL, AngularJS, Django, Elasticsearch, Ansible, MongoDB, Microservices, Docker, ELK, ArcGIS.
- **Application Developer – Bank of America** (Dec, 2018 – Nov, 2019)
 - Developed and refactored an existing legacy app built on Django, focused on logging, transactions, security, throttling, and, React JS to optimize single-page interactive UI. Performed unit testing, user Acceptance Tests, massive data extraction, and statistical modeling with large unstructured datasets using pandas and NumPy.
Tech Stack: Python, Linux, Django, Oracle DB, React.js, ETL, Swagger, REST, Pytest, Jira.
- **Software Developer – ReformedTech** (Sept, 2014 – Dec, 2018)
 - Designed and developed multiple projects' components using Django & Flask framework using MongoDB and, RDBMS. Integrated third-party API with ETL processing and, built several microservices, and UI Dashboards for Customers and Administrators. Identified bottlenecks and optimized performance using Elastic Search Indexing.
Tech Stack: Python, MySQL, Linux, Django, MongoDB, AWS, Flask, ETL, Node.js, Microservices, NoSQL, Vue.js, GCP, Jenkins, REST, Elastic Search, Jira.

Education

Masters in Computer Science

GPA: 3.55 / 4.00

University of Bridgeport, CT

Graduation: Dec, 2018

Notable Personal Project

- **Fully functional stock market website:** Integrated Google Finance API to access real-time stock data using Django. Simulated real stock market workflow & functionality displaying the stock price, user portfolio, transaction history, and receiving orders to buy and, sell the stocks. Also implemented Recurrent Neural Network (RNN) to predict stock price.
